                                                                    Novel moss nucleic acid molecules encoding a carbohydrate metabolism related protein useful for modulating production of fine chemicals such as carbohydrates, cofactors and enzymes from microorganisms and plants
                                                                                                                                                                                                                                                                                                                                                                             AAM00035 standard; Protein; 156
Phis Invention relates to nucleic acid molecules AAH88706 related from physicontirella patens (a moss), which encode carbohydrate metabolism related proteins (CMRP) represented in AAM00022 - AAM00110.
                                                                                                                                                                                                           14-DEC-2000; 2000WO-EP12697
                                                                                                                                                                                                                                                                                                                    Endoxyloglucan transferase sequence #103
                                                                                                                                                                                                                                                                                                                                        28-SEP-2001 (first entry)

utilised in

racladed in the invention is a vector containing the CMPP colM. and a host ceal transformed with the vector. The host ceal (a microorganism Corynebacterium or Brevibacterium, moss or algae or a plant ceil) is useful to reproducting a fine chemical such as carbohydrates, cofactors and/or enzymes. The nucleic acid molecules are suitable for modifying a carbohydrate production system in a host, e.g., microorganisms and onzymes lin other. They are also useful to identify those DNA sequences and onzymes in other species which are useful to modify the biosynthesis of starch, ceil wall polysaccharides and sugards. The nucleic acid molecules may be ceil to include the content of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             make it a better or more efficient producer of one or more fine chamicals. Autogeness of one or more cares may also result in CMRPs having altered activities which indirectly impact the production of one more desired fine chamicals from plants. Primers Aut88705. Aut88707 are used in the sequencing of the CMRP cDNA sequences of the invention.
                                                                          The present sequence represents a tick salivary gland antigen criated immunogen. The present invention also describes a tick derived series protesse and a tick derived cysteine protesse. A nucleotide sequence encoding any of the above proteins can be used in a wacchie against tick carried infections for domestic animals such as cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tick salivary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY82699;

protein of the Invention, designated SFS. SFS binds specifically to mammalian fibronectin or its analogues or fragments. The protein, its analogues or fragments may be used for the preparation of a vaccine that protects horses against strangles (a world-wide distributed and serious disease of the equine upper respiratory tract) caused by 5. equi infection. The antibody and/or antiserum may also be used for the prophylactic or therapetric treatment of 5. equi infection in mammal, especially horses. The use of vaccines containing the fibronectin binding specially horses. The use of vaccines containing the fibronectin binding

Novel moss nucleic acid molecules encoding a carbohydrate metabolism related protein useful for modulating production of fine chemicals as a carbohydrates, cofactors and enzymes from microorganisms and plan plants such

Claim 30; Page 127-128; 133pp; English

This invention relates to nucleic acid molecules AAH88706 isolated from physconitrella patens (a moss), which encode carbohydrate metabolism related proteins (CMRP) represented in AAM00022 - AAM00110. Included in the inventions (CMRP) represented in AAM00022 - AAM00110 included in the invention is a vector containing the CMRP CONNA, and a bast cell transformed with the vector. The host cell (a microorganism, Corynebacterium or Brevibacterium, moss or algae or a plant cell) is ceptual for producing a fine chemical such as carbohydrates, cofactors useful for producing a fine chemical such as carbohydrates, cofactors useful for producing a fine chemical such as carbohydrates.

This invention describes a novel nucleic acid (I) containing a sequence that encodes hemocyanin (II) a domain of (I) or its fragment with the immunological properties of at least one domain of (II). The products of the invention have cytostable, virucide, antibacterial, antiparasitic, immunomodulatory and antiparentic activity. (I), and constructs daditionally containing antiper-encoding sequences, are useful in gene therapy of tumors, polypeptides encoded by (I) are useful for treating and carcinoma (of bladder, epithelium, ovary, breast, bronchi or colon-rectum), also hypertension, as vaccines, for treating cocaine misuse and very generally as carriers for pharmaceuticals, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid encoding hemocyanin, and for recombinant production of fus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-587517/55

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 M. crenulata hemocyanin KLH2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       related Brevibactelum species and Acetobacter xylinum and Chlorella to make it a better or more efficient producer of one or more fine chemicals. Mutagenesis of one or more CARPS may also result in CARPS having eltered activities which indirectly impact the production of one or more desired. Activities which indirectly impact the production of one or more desired fine chemicals from plants. Primers AAH80705 - AAH80707 are used in the sequencing of the CARP CDNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carbohydrate production system in a host, e.g., microorganisms and plants. They are also useful to identify those DNA sequences and enzymes in other species which are useful to modify the blosynthesis of starch, cell wall polysaccharides and sugars. The nucleuc acid molecules may be utilized in the genetic engineering of Corynabacterium glutamicum and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20-AUG-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-MAR-1999;

cytostatics. They may also be used to generate antibodics (Ab). Probes based on (I) and Ab are useful for detecting tumor-specific DNA in a cell (by detecting specific binding to cellular DNA or proteins), particularly where associated with the types of cercinoma listed above. Hemocyanins can be produced recombinantly relatively inexpensively and in adequate amounts, eliminating the need to culture gostropods. When used as a carrier, (II) significantly increases the half-life of the attached pharmaceutical, by inhibiting ultrafiltration in the kidneys.
                                                                                                                                                                          Sequence

nucleic acid encoding hemocyanin, useful for gene therapy of tumors for recombinant production of fusion proteins for vaccination

Claim 25; Page 133-134; 180pp; German.

This invention describes a novel nucleic acid molecule (N) encoding hemocyanin, a hemocyanin domain or a functional fragment of it with the immunological properties of at least one domain and the immunological properties of at least one domain and the immunological properties of the last one domain and the immunological properties of the immunological properties of the immunological properties of the immunological properties and vasctness or for gene therapy. Compositions comprising nucleic suds of the immunological properties are useful in treating parasite and value fections and as pressure, bladder carcinomas, such in treating parasite and value abnormal months of the immunological properties are useful in treating parasite and value fections and as pressure, bladder carcinomas, such in treating abnormal accommens, overian carcinomas, the manual properties are the properties and value and continuous. It may also è used to cure cocaine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT
                                 This invention describes a novel nucleic acid (I) containing a sequence that encodes hemocyanin (II), a domain of (I) or its fragment with the C immunological properties of at least one domain of (II). The products of the invention have cytostatic, virucide, antibacterial, antiparasitic, mununomidiatory and antihypertensive activity. (I) and constructs cadditionally containing antigen-encoding sequences, are useful in gene therapy of tumors polypeptides encoded by (I) are useful for treating c parasitic or viral infections and tumors, particularly schistosomissis and carcinoma (of bladder, pthelium, vary, break, bronchi or colon-rectum), also hypertension, as vaccines, for treating cocalne complete and very generally as carriers for pharmaceuticals, e.g. probes based on (I) and Ab are useful for detecting tumor-specific bhairs cocalne cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab), Probes cytostatics. They may also be used to generate antibodies (Ab) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                         This invention describes a novel nucleic acid molecule (N) encoding hemocyanin, a hemocyanin domain, or a functional fragment of it with the immunological properties of at least one domain of hemocyanin, and which comprises at least one intron is new. The products of the invention have cytostatic and vasotropic activity and can be used in vaccines or for gene therapy. Compositions comprising nucleic acids of the invention are useful in treating tumors. Compositions comprising hemocyanin polypoptide are useful in treating parasite and viral infections and as an antitumor agent it is also useful in treating abnormal blood pressure, bladder carcinomas, epithelial carcinomas, overlan accinomas, namnary carcinomas, pronchial carcinomas, and colon carcinomas. It may also be used to cure cocaine addiction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel nucleic acid molecule (N1) encoding hemocyanin, a hemocyanin domain, or a functional fragment of it with the immunological properties of at least one domain of hemocyanin, and which comprises at least one intron is new, the products of the invention have cytostatic and wasotropic activity and can be used in vaccines or for gene therapy, compositions comprising nucleic acids of the invention rate useful in treating tumors. Compositions comprising hemocyanin polypeptide are useful in treating parasite and viral infections and as pressure, bladder carcinomas, puthelial acreinomas, ovarian carcinomas, ovarian carcinomas, and colon carcinomas, bronchial carcinomas, and colon carcinomas. It may

Its mains act to sequence may deduced from a gene membrane. The mains act may be send to the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Actinobacillus pleuropneumoniae transferrin binding protein l

                                                                                                                                                                                                                                AAW31347
                                                                                                                                                                                                                                                 RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This polypeptide comprises an active truncated form of the novel tumour suppressor protein SSeCKs that is a substrate of protein knows and which acts as a negative regulatory of mitosis and as an alministor of the transformed phenotype. Its amino acid sequence was administer of the transformed phenotype. Its amino acid sequence with the sequence (see AAV0310) obtained from MIN373 cells. The full-length SSeCKs sequence (see AAV0310), as well as provided. Full-length SSeCKs sequence (see AAV0310), as well as provided. Full-seanced by such mucleic acid (see AAV0330), as well as solided proceins encoded by such mucleic acid structure of acids, host cells, and methods of inhibiting the expression of a transformed phenotype in a host cell by introducing the rice acids. Introduction of a SSeCKs nucleic acid or gene product into a host cell in incleic acids. Introduction of a SSeCKs nucleic acid or gene product into a host cell inhibits mitosis of the host cell.

CC aproliferation and/or with the expression of a malignant phenotype. SSeCKs can also be used to treat or identify disorders of comprised the contract of diseases associated with disorders of comprised the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contr

                                                                                                                                                                                                                                                                    The present sequence is a polypeptide encoded by one of a large number of 5. ESTS derived from mRNAs encoding secreted proteins. The 5. ESTS were prepared from the lamman RNAs or polyAt RNAS derived from 50 different tissues. EST sequences usually correspond mainly to the 3 untranslated region (UTR) of the mRNA because they are often obtained from onlygo-dT primed CDNA libraries. Such ESTS are not well suited for isolating cDNAs sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included 5' ESTS are derived from mRNAs and genomic DNAs. 5' ESTS are also used in dagnostic, foremic, gene therapy and chromosome mapping procedures. They are used to obtain upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid that is a 5' expressed sequence tag (5'EST) for obtaining conks and genomic DNAs that correspond to 5'ESTS and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2000-500381/45.

Nand P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate p expression. For example, N and P may be used to treat discorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing in Additionally, N may be used to produce the coll on cancer associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the protects and that provertion, diagnosis and AAB77798 represent sequences used in the exemplification of the

This is the amino acid sequence of a novel Bacillus thuringiensis toxin used in the method of the invention, to control lepidopteran pests. The new toxins are useful as pesticides, especially for the control of ostrinia nublialis, Heliothis virescens, and Helicoverpa zea. The polynucleotide coding sequences are useful for recombinant expression of the toxins and the primers, together with probes derived from the new sequences, are useful for the identification and characterisation of novel genes that encode pesticidal toxins.
                                                                                                                                                                                                                                                      Claim 14; Pages 32-34; 50pp; English.

proteins from various Mycobacterium species microorganisms. The encoding nucleatide sequences can be used as primers and probes for methods for detecting and identifying mycobacteria, especially belonging thouse to the tuberculosis complex. The encoded proteins can be used in vacches for immunisation against a bacterial or viral infection.
                                                                                                                                                                                                                                  Mycobacterial DNA vectors containing reporter constructs - identifying coding or promoter sequences involved in infection-associated protein expression

convolution and manuscriptions of the moderative interference of convolution and the moderative interference of convolutions and the moderative interference of convolutions and convolution in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition provides which are diagnosed or treated include in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include conditions are consistent of the pathological condition. The providers which are diagnosed or treated include catching and contact in the providers of the contact in the contact in the contact in the providers which are diagnosed or treated include attainment diseases, hyperproliferative disorders, carbovascular disorders and providers which are diagnosed or treated include attainment of the contact in the providers which are disported to contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the contact in the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The polynucleotide sequences given in AAC8108 to AAC81134 encode the human secreted proteins given in AAB45305 to AAB45357 to AAB45384 represent human secreted polypeptide sequences and proteins bomologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of activities include: antiarthritic; Immunosupplessive; antitheumatic; antiprolifigative; expressive; antitheumatic; antiprolifigative;
                                                                        components. AAC8107:
the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 449; 454pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC This invention describes novel human nucleic acid (cDNA), sequences (A), that are highly expressed in uterine tumour tissue and which have can attionner and cytostatic activity. (A) are used (1) for recombinant expression of polyaptides (B) and (1) to isolate complete genes (B) care used (1) including expression from genet suitable for treatment of uterine or candometrial cancer; (11) discribe the treatment base forms of cancer (including expression from genet herepy vectors) and (11) for concerning expression from seventh are identified by assembling ESTS (CC expressed sequential of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series of the series
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local

The primers are useful for synthesising polynucleotides and gene therapy and particularly full-length cDNAs. The primers are useful for the section and/or diagnosts of the abnormality of the proteins encoded by the full-length cDNAs. The primers at also weful for the detection and/or diagnosts of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. Anilo165 to Anilo28 and Anilo333 to Anilo742 represent human cDNA sequences; and Anilo29 to Anilo332 and Anilo333 to Anilo332 and anilo acid sequences; and Anilo29 to Anilo332 and Anilo333 to Anilo332 anilo anilo acid sequences; and Anilo329 to Anilo332 and Anilo333 to Anilo332 anilo anilo acid sequences; and Anilo329 to Anilo332 anilo anilo acid sequences; and Anilo329 to Anilo332 anilo anilo acid sequences; and Anilo329 to Anilo333 to Anilo333 to Anilo332 anilo anilo acid sequences; and Anilo332 to anilo acid sequences; and Anilo332 to anilo acid sequences; and Anilo332 to anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anilo acid sequences; anil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosts of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes primer sets for synthesising 5602 full-length coMns defined in the specification. Whore a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 8; SEQ ID 16665;

The sequence can be used to treat, model and diagnose defects in myogenesis responsible for ahormal development and disease conditions in mammals including lumens. These include the human disease cleidocranial displasta (CDD), rhabdomyosarcomes and other cancers affecting muscle tissue in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnosis of
development
        AN34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX31990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, Sinusitis, purulent ottits media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY3584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae
                                                                                                                                                                                                                                                                                                                                                                           Respiratory disease; sinusitis; purulent c

C The polynucleotide sequences given in AAC/4337 to AAC/4366 amoode the C human secreted proteins jiven in AAB3481. AAB3481. AAB3482 represent human secreted polyneptide sequences and proteins C hambidgus to them, which are given in the exemption of the present C invention. Human secreted proteins have activities beginned on it he tissues and cells the genes are expressed in Example of activities include: C cytostatic; immunosuppressive; noncropic: maniformetries include: C cytostatic; immunosuppressive; noncropic: maniformetries include: C cytostatic; immunosuppressive; noncropic: maniformetries include: C cytostatic; immunosuppressive; noncropic: maniformetries include: C cytostatic; immunosuppressive; noncropic: maniformetries include: C cytostatic; immunosuppressive; noncropic: maniformetries; and include in antiformetries; and incorpic antiformetries; and incorpic antiformetries; and cytostatic; antiformetries; and incorpic and polynicleotides and polypatides are useful for preventing of amelical condition in e.g. humans, mice, incorpic and also be used as a food additive or preservative to increase or c chromosome identification. They are also useful as probes for diagnosing c candovar ovary cancer may are also useful the system public for condition covary cancer secreted protein useful the system public condition and prevention of (a) cancer (b) families diagnosis; c antiformetries disorders; (d) wand healing; (e) insurediation diseases; and (f) infections diseases such as during the neurological diseases; parasitic infections. AAC74328 to AAC74336 and AAS9401 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

XP36 beers methods and compositions for diagnosing tuberculosis. It provides and compositions for diagnosing tuberculosis. It provides polypeptides (see AAV6421-W64379) comprising an antigenic portion a soluble M. tuberculosis antigen, or an immunogenic portion of M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using

                                                                                                                                                                                                                                                                                                                                          Human prostate cancer antigen protein sequence SEQ ID NO:1529.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                               13-MAR-2001

proteins, called prostate cancer antigens, given in AAB56363 to AAB57302
The prostate cancer antigens can have neuroprotective, cytosteatic,
cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal,
nephrotropic, antiinfective, gynaecological and antibacterial activities nephrotropic, a and can be used AAF15566 to AAF16505 encode the human prostate cancer associated The prostate cancer antigen

is family of polypeptides. Host could reflected with a vector comprising the HHHHJ20 nucleic acid are used for the recombinant expression of the polypeptide. The HHHHJ20 nucleic acid may be used as probes or primers to gene, in a patient compared to a healthy individual. This may lead to the concern actoimmune diseases, asthma, rhematoid atthirits, Albeimer's classes, AIDS and stroke, Similarly measuring the amount of the polypeptide in a sample from a patient can be used to diagnose these cidenses. The polypeptide may be used to identify its agonists or content antique to identify membrane-bound or soluble receptors. A cfusion protein of the HHHHJ20 polypeptide and an Igc heavy chain so content action of the HHHHJ20 polypeptide and an Igc heavy chain may be used in therapy, diagnosis and drug screening. The polypucleotide is used content of the HHHHJ20 polypeptide and an Igc heavy chain may be used in therapy, diagnosis and drug screening. The polypucleotide is used content of the HHHHJ20 polypeptide and an Igc heavy chain may be used in therapy, diagnosis and drug screening. The polypucleotide is used to first process the polypucleotide is used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

A

protein. Probes from the gene sequence can be used for determining presence of an inf protein or analogue, or for determining against activity in a test substance. The sequence can be used for treatmodel and dispose defects in myogenesis responsible for treatmodel and dispose defects in myogenesis responsible including humans. These includes the human disease collidocranial displasala (CDD), rhabdomyosarcomas and other cancers affering massic tissue in manuals.

**Microbiology 142:3113-3123(1996).*

-I- PUNCTION: THIS IS A COMPONENT OF THE PHOSPHOENOLPYRUVATE-DEPENDENT SUCRAR EMOSPHOTRANSFERASE SYSTEM (PTS), A MAJOR CARBOYPRAFTE ACTIVE -TRANSFORT SYSTEM. THE IICD DOMAINS CONTAIN THE SUGAR BINDING SITE AND THE TRANSFERS THE THE DOMAIN CONTAINS THE REMARKE PHOSPHORYLLATION SITE (THE DOMAIN SCHENGHO-HEP). IIA TRANSFERS ITS PHOSPHORYLL GROUP TO THE IIB DOMAIN WHICH FINALLY TRANSFERS IT TO PHOSPHORYLL GROUP TO THE IIB DOMAIN WHICH FINALLY TRANSFERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.
